STAFF

Edones Gashi

Founder & CEO

Specialist in aesthetic ceramics and orthodontic work with Maestro 3D.

Muhamed Q.

Transport & Delivery Coordinator

Arben M.

Designer in ExoCad and Blender 3D, as well as CNC operator.

Ermal L.

Specialist in the production of transparent aligners.

Nita B.

Responsible for communication and logistics of the laboratory.

Atije G.

Responsible for financial management and accounting records.

Tahir G.

Responsible for organizing materials and maintaining machines.

Njomza U.

Accountant for finance and fiscal reports

Dalina G.

Designer for Glaze & Visual Effects – MiYO

VISION & MISSION

Amber Dental Lab is an innovative laboratory, committed to quality and efficiency.

Founded In 2022, with a 3D concept developed since 2020.

Staff With over 8 years of experience in the dental industry.

Technology Exclusively using intraoral scanners and 3D printers licensed in Japan and Europe.

Collaboration With more than 40 dental clinics.

Our Mission

To simplify the prosthetic work of dental clinics that collaborate with us.

To handle complex cases with maximum efficiency using the latest technology.

With European standards and products certified by ISO and CE.

OUR PRODUCTS

What do we offer?

- **Transparent aligners (Orthobox)**
- **Zirconia crowns**
 - Aesthetic veneers
 - Titanium iBarr framework
 - Zirconia framework on implants

- **Other 3D services**

- Designs
- Milling
- 3D Printing

TRANSPARENT ALIGNER

01

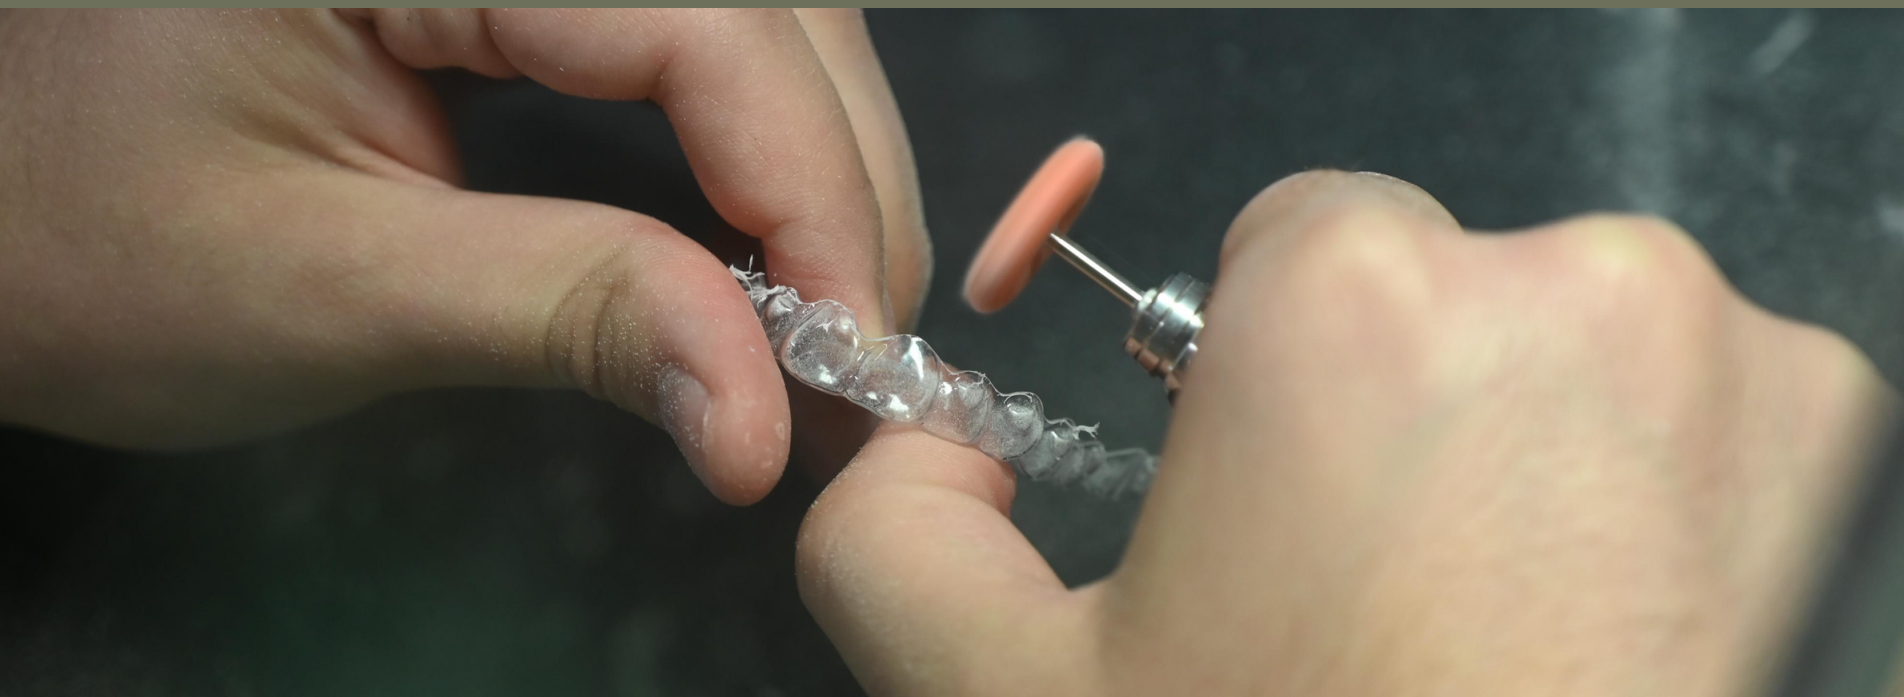

The clinic sends us 3D files (STL, OBJ) obtained from

- Intraoral scanner directly from the patient.
- Traditional models scanned from plaster.

02

After receiving the files, we

1. Verify the quality of the digital models.
2. Start the design and production process.
3. Ensure continuous communication with the clinic for any necessary adjustments.

WORK PHASES

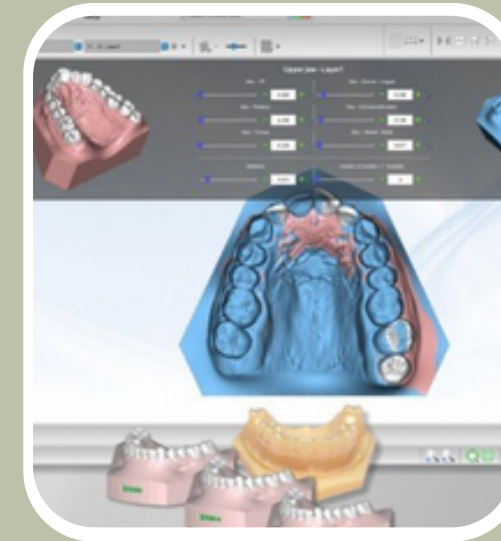

01

After receiving the 3D impressions in the laboratory, the orthodontic analysis begins, which takes about 2 working days in the laboratory.

02

The clinic receives the video and the orthodontic analysis book from the laboratory. This phase is done in collaboration with our orthodontists.

03

After confirmation from the clinic and the patient, the production of the transparent aligners begins, which takes about 3 working days.

Case Treatment Division

- Mild cases (Level I): The treatment is not divided and includes up to 15 aligners at the basic price.
- Complex cases (Level II/III): The treatment is divided into phases, in collaboration with the doctors.

How is the treatment divided?

The treatment is carried out in collaboration with the doctors and consists of several steps:

1. First step – The initial improvement phase, followed by a check-up with the doctor to assess the results.
2. Second step – If necessary, adjustments are made, and the process is repeated for the next phase.
3. Continuous monitoring – Each phase is carefully followed and monitored until the full completion of the treatment and achieving the perfect outcome.

Payment

If the treatment is divided into several phases, payment is made according to the completed parts (see pricing section)

ZIRCONIA CROWN

AMBER

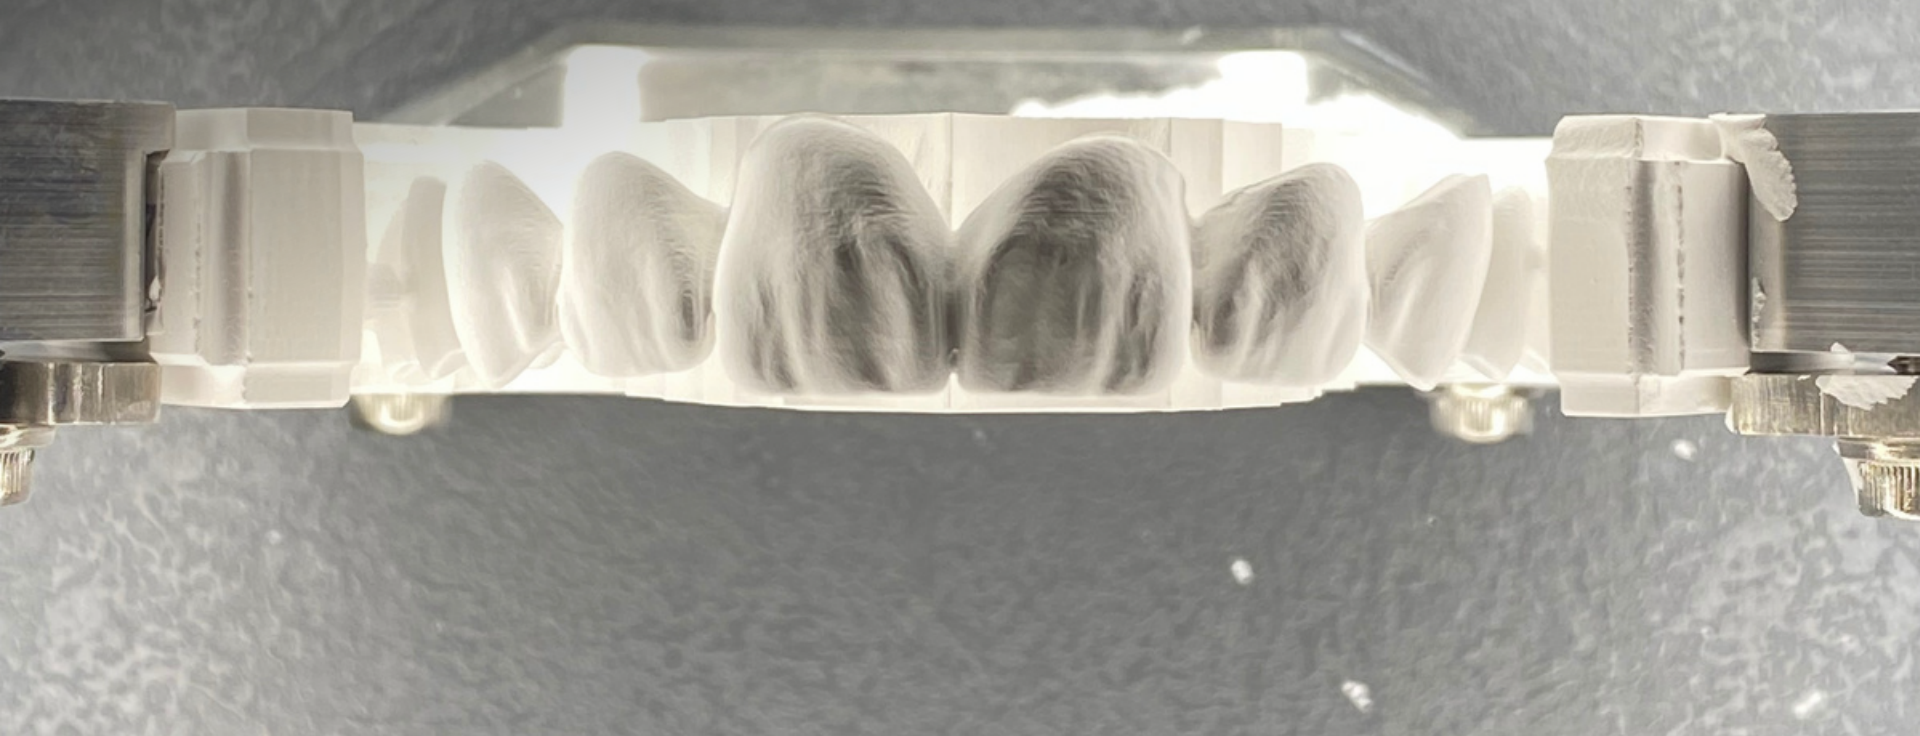

- Zirconia Tooth Models are accepted in STL/OBJ format from intraoral scans, sent via email.
- First patient try-in – 1 working day: This phase includes sending the 3D file for printing, both to the clinic for physical testing in the patient's mouth and to the lab for further processing.
(The try-in is an optional phase and is especially recommended in complex or severe clinical cases.)
- The resin try-in of the provisional teeth is printed and placed in the patient's mouth for a period of 3–4 days until the gums have healed. After this, a new impression is taken with necessary corrections, along with an additional impression without the teeth, over the now healthy gingiva.

Advantages

- Parallelism control of crowns
- Perfect adaptation at the margins
- Multiple try-ins until the shape is perfected and approved for permanent production
- Production after confirmation: 3 working days
- Professional training and explanations for each stage of the process

P.S. If you do not have a 3D printer for this stage, we can send you the same as a SMILE CREATOR photo or STL file.

WORK UNTIL DELIVERY

AMBER

01 Milling

If the trial is successful, the Milling phase begins, where you choose the type of zirconia block you wish to use for your work.

02 Staining with Noritake Colorants

Before the sintering phase, the staining with aesthetic effects from Noritake is carried out to ensure real colors and maximum aesthetics of the work.

03 Adaptation and Processing

In this phase, the final adjustments are made, and the work is prepared for finalization.

04 MiYO Effects and Glaze

In the final phase, the work acquires realistic and aesthetic colors, finished with glazing for the desired effect.

PRICING

Transparent Aligners (Orthobox)	
Video Analysis	Free!
Orthodontic Analysis + OrthodonticBook (for one jaw)	200€
Orthodontic Analysis + Orthodontic Book + File for Printing (for one jaw)	300€
Complete Production of Transparent Prosthesis (for one jaw)	800€
Partial Production with Monitoring (Orthodontic Stage II / III)	€50 for one transparent aligner

Zirconia Crown	
Smile Creator + Photo Video	Free!
Multilayer Zirconia Crown - Basic	150€
Multilayer Zirconia Crown Aesthetic with Colorant Effects - MIO	180€
Multilayer Zirconia Crown With Ceramic Modeling / Super Aesthetic	220€
Multilayer Zirconia Crown Reinforced Structures with iBarr and Over Implants	240€

LOGISTICS AND TRANSPORTATION

PRODUCTION TIME

5-7 working days, with the option for expedited delivery based on agreement.

SHIPPING (DHL)

We guarantee safe arrival!
Secure packaging for maximum protection.

ZIRCONIA CROWN

Up to 2 members – shipping 50€.
3+ members – FREE shipping!

TRANSPARENT PROSTHESIS

shipping always included in the price!

Billing

Regular billing is done through a dental warehouse with a brotherly connection, as the state does not allow direct export from us.

Maximum Security & Flexible Payment!

Monthly payment agreements & discounts for long-term collaborations!

RECOMMENDATIONS

I've had the pleasure of working with Amber, an exceptional dental technical team known for their precision, artistry, and reliability. Their work consistently meets the highest standards—whether it's crowns, bridges, or complex implant restorations, every piece is crafted with care and attention to detail. I confidently recommend Amber to any dental professional seeking top quality prosthetic solutions and a smooth, dependable collaboration.

Binaj Dental

Amber Laboratory is a synonym for professionalism and innovation. In collaboration with the laboratory, we have successfully managed and resolved complex and challenging cases involving irregular bites and vertical discrepancies. Despite the difficulties, we achieved excellent results, and our patients were ultimately satisfied with the outcomes.

Kuki Dent +

Amber has proven to be a dental laboratory with an extraordinary dedication to the field of fixed prosthodontics. The 3D-printed trial pieces have solved problems we didn't even know we had, and they can be resolved so easily. We have checked the bite, the adaptation in the sulcus, and the anatomical shape. The patient has seen the teeth in advance before production in zirconia.

Metropolis

RECOMMENDATIONS

Amber combines advanced laboratory technology with deep knowledge of dental morphology, which is reflected in personalized results.

Their work is harmonious with the occlusion and requires almost no clinical modification.

Thanks to the 3D-printed plastic trial pieces, many previous problems have been eliminated.

Dental Center

Our clinic has been working with the Amber laboratory for several years on transparent aligners. The support and communication

between the clinic and the laboratory has never been lacking, and through this collaboration, every case has gone as it should.

They are punctual, flexible with every idea and suggestion, and very transparent and high-quality in their work.

Ar Dent

The Amber laboratory has been serving us for 4 years with their products, particularly transparent aligners – Orthobox. Together, we have successfully completed around 400 cases. Despite the patients' varying levels of compliance, the Amber laboratory has always been ready to provide support and has always been there for the continuation of the most efficient work. The patient, along with the clinic and the laboratory, were all very satisfied.
